Products/Services: Anesthesia, Respiratory, Airway Management and Critical Care Medical Device Disposables

Year Founded: 2012

Trinity Medical Devices Inc., a company intensely focused on delivering high-quality single-use medical products at favorable costs to the global healthcare market; has recently announced the expansion of its OEM Global Sourcing Initiative. This initiative is poised to provide additional value-added benefits to the healthcare market that has been struggling with costs, many of which have been substantially increased by the pandemic.

Trinity provides global sourcing/contract manufacturing services to major medical device companies, both domestic and international, including several multi-hundred million and billion-dollar revenue size customers with focus in the following key areas:

- Anesthesia
- Respiratory
- Critical Care
- Infection Prevention
- CPAP/Sleep Medicine
- Neonatal
- EMS
- PPE

Trinity has access to domestic and international highly qualified med-tech manufacturing facilities and places the utmost importance on quality through its proprietary regulatory system.

The Coronavirus affected many businesses and especially the general public and healthcare workers tremendously; during this time Trinity successfully provided millions of pieces of greatly needed personal protective equipment, such as N95 masks, thermometers, nasal swabs, surgical gloves and an innovative SafePack Kit product for daily consumer use to healthcare institutions.

Through many years of servicing Fortune 500 and midsize companies with their product manufacturing needs, Trinity has been a reputable supply partner. Trinity

has now embarked on a highly focused business model to offer medical device companies with a well-seasoned proven alternative to their manufacturing needs.

“I can’t express enough how pleased we are to expand our OEM business,” says Sam Kurian, Co-Chief Operating Officer at Trinity Medical Devices. “The Trinity infrastructure is perfectly suited to provide our customers with products of the greatest quality with significant cost savings through contract manufacturing. But we don’t just help with cost savings — we help our customers grow. We become true partners with all of our customers and allow them to focus on their core competencies and in doing so, grow their businesses. I believe we will continue to see a market trend in which consumable medical devices fit into the portfolio of a technology or equipment-based business, or with companies that maintain a large infrastructure to accommodate a wide variety of outsourced services. We are excited about being able to utilize our resources and provide a complete outsourcing solution.”

Richard Kennedy, Co-Chief Operating Officer and Head of Regulatory commented, “Whether you are looking for partners in a global supply chain, or domestic Made-in-the-USA solutions, our innovative regulatory system provides the framework to meet Quality and Regulatory standards necessary in qualifying these sources and solutions to meet your needs.”

We at Trinity Medical Devices wish to express our appreciation to the Governor of New Jersey and members of the NJ EDA for their support through the state’s EDA Investor Tax Credit Program that enabled Trinity to provide a New Jersey tax incentive by way of their investment in our exciting growth oriented medical global sourcing business.

Trinity Medical Devices Inc. is an FDA registered, ISO 13485 certified, private medical device company focused on providing high-quality cost-effective alternatives in the single-use medical device market. For more information on Trinity Medical Devices, please visit: www.trinitymdi.com
